AB The invention relates to a cosmetic composition containing a continuous liquid fatty

phase, which is gelled or thickened with at least one dextrin ester with a degree of substitution of less than 2. The dextrin ester makes it possible to obtain a stick that does not exude, and which gives a glossy, non-migrating and long-lasting deposit over time when applied. For example, an anhydrous foundation contained dextrin palmitate (Rheopearl TL) 4.8, dextrin palmitate (Rheopearl KL) 4.8, isohexadecane 15, isononyl

isononanoate 16.2, microcryst. wax 3.2, polymethyl methacrylate 7.3, fumed silica 2.3, lauroyllysine 5, polyurethane-silica powder 8, polymethylsilsequiloxane microbeads 5.2, hydrophobic coated iron oxide 2.1, hydrophobic coated titania 6.3, and isododecane balance to 100 %.

AB A make-up composition comprises (a) at least one liquid fatty phase which is structured by at least one semi-crystalline polymer having an organic structure and a m.p. which is greater than or equal to 30 °C; (b) a dye; and (c) a volatile oil, said liquid fatty phase, dye, volatile oil and polymer form a physiol.-acceptable medium. In particular, the inventive composition takes the form of a stick that deposits a shiny film on keratin materials, such as the lips, which does not transfer onto objects with which said keratin materials come into contact. A lipstick contained stearyl acrylate homopolymer (preparation given) 14, behenyl acrylate copolymer (preparation given) 10, pigments 8.7, hydrogenated isoparaffin 16.2, Solsperse 21000 2, isododecane 30, Ph silicone 16.2, and liquid lanolin 3%.

AB The invention concerns a composition containing a liquid lipophilic body and an organic

polymeric compound comprising: (a) a polar part having at least two repeat units including at least a group capable of forming hydrogen interactions with the lipophilic body, said group including at least a heteroatom; and (b) a lipophilic part comprising a carbonaceous chain with at least four carbon atoms or a silicon chain including at least two silicon atoms, the organic polymeric compound having a mean mole weight less than 1000, the lipophilic body and the organic compound forming a physiol. acceptable medium. Said composition constitutes in particular a non-greasy make-up base or a lipstick having non-transfer properties. The polymer is in particular a polyamide comprising a hydroxylated fatty acid ester chain. A cosmetic foundation contained Crayvallac SF 8, cyclopentasiloxane 31.53, octyldodecanol 35.47, pigments coated with aluminum stearoyl glutamate 10, and Me polymethacrylate 15%.
